

Sharing Common Ground...

With a desire to be good stewards of the earth, we reduced our parking lot by half to create a living green space.

You are welcome to explore the gardens.

Raingardens help keep the Mississippi River clean by reducing stormwater runoff and also replenish groundwater.

Our four raingardens are shallow depressions that capture runoff from the roof and parking lot, allowing water to soak into the ground instead of becoming stormwater runoff.

The raingardens are planted with deep-rooted, native perennials and grasses that naturally filter and remove pollutants.

We gratefully acknowledge the Mississippi Watershed Management Organization for their generous support of this project. To learn more about raingardens visit www.mwmo.org
